WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Disc 120 mm across, 6 mm thick, with a hub 20 mm across, 9 mm long, on its chain-side face. Bore 12.4 mm with a flat 4.6 mm from centre.

Maize plate: 4 cells in the rim, 14.3 mm long, 8.7 mm deep, through the thickness. Other crops: cells from the rule in the model (seed length x 1.15 + 0.5, width x 1.05 + 0.3; thickness at least 6).

Print flat, hub up, no supports: about 44 g and 1.5 h in PETG.

Mark the crop and cell count on the face (raised text).

Fit: slides onto the shaft's D-flat until the hub meets the collar; the hub runs in the housing's 22 mm hole; the knob holds it.

Check: a kernel sits in each cell level with the rim, not proud of it.
