WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 700 mm lengths of 25 x 25 x 1.5 tube; square and deburr the ends.
Every hole goes through both side walls, square to the side faces, on the centre line of the side face; distances from the front end.
Both rails, 6.5 mm: 68 and 92 (front drop plate), 276 (front upright and clip), 425 (rear upright), 507.5 (middle clip), 645 and 675 (rear drop plate). Clamp the pair together and drill these at once.
Chain-side rail only: 6.5 mm at 12 and 40 (marker kit), 315 and 385 (bearing plate and housing lugs), 350 at 6 mm above the centre line (lower bearing bolt); 8.5 mm at 220 (tensioner pivot).
Deburr inside each hole so the bolts pass freely; do not crush the tube: bolts through it are tightened snug, not hard.
Check: lay the drop plates, clips and bearing plate on the rail and look through each hole.
