WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut one 95 mm length of 25 x 25 x 1.5 tube; the ends must be square, since they butt against the inside faces of the rails.

Four 6.5 mm holes front to back through both walls, on the centre line of the side face, at 12.5, 37.5, 57.5 and 82.5 mm from one end. The outer two take the corner clips, the inner two the chain bracket.

Fit: between the rails, 400 mm behind the drive axle (480 mm from the front end of the rails), held by two corner clips on its rear face.

Check: it fits between the rails with no gap and no forcing.
