WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Disc 120 mm across, 6 mm thick, with a hub 20 mm across, 11 mm long, on its chain-side face (14 mm from the centre plane, so a thicker plate has a shorter hub). Bore 12.4 mm with a flat 4.6 mm from centre.
Maize plate: 4 cells in the rim, 14.3 mm long, 8.7 mm deep, through the thickness. Other crops: cells from the rule in the model (seed length x 1.15 + 0.5, width x 1.05 + 0.3; thickness at least 6).
Print flat, hub up, no supports, 3 walls, 20 % infill: about 38 g and 1.4 h in PETG (groundnut plate, 10 mm: about 1.9 h).
Mark the crop and cell count on the face (raised text).
Fit: slides onto the shaft's D-flat until the hub meets the collar; the hub runs in the housing's 22 mm hole; the knob holds it.
Check: a kernel sits in each cell level with the rim, not proud of it.
